

German Fachdental Award 2019 for same-day dentistry machine

vhf wins first prize for the Z4

Ammerbuch/Hauppauge, October 22, 2019: vhf's Z4 is still on the road of success by winning this year's Fachdental Award. The dental milling and grinding machine has received this desired innovation prize of the dental industry, which was awarded for the fifth time at the trade shows Fachdental Leipzig and Fachdental Südwest in Stuttgart, Germany.

The Z4 convinced the visitors of the two trade shows: they voted online or on-site to decide which company should receive this seal of quality. The competition awards prizes to products that are outstanding in terms of their degree of innovation, offering improvements for patients and work in the practice or laboratory, or feature unique design solutions. The Fachdental Award has been presented by Messe Stuttgart since 2015.

The high-precision dental milling machine Z4 combines innovative design with intuitive operation and many automated work steps. Developed for same-day dentistry, it enables patients to receive high-quality restorations much faster. The block material is fixed without tools and can therefore be exchanged in seconds. Thanks to the integrated compressor and Wi-Fi, the machine does not require any supply lines other than a power connection. The Z4 is also validated for all common scanners and CAD software and offers fully integrated workflows. So the users benefit from easy operation with one interface.

"We are excited about winning the first place in the Fachdental Award, especially because the trade show visitors decided who was going to be awarded. This is a great reward and a wonderful motivation," says Christine McClymont, Head of Marketing and Communications at vhf. Commenting on the award-winning machine, she points out: "The Z4 impresses our users with its superior precision and its openness for materials, scanners and software. I am sure that the Z4 will enable many more users to enter the world of digital dentistry."
