

vhf presents innovative tablet control for milling machine from the X series

Perfect overview for efficient production.

Ammerbuch, 31 May 2022: When it comes to Industry 4.0, the demand for user-friendly and future-oriented solutions is also growing with regard to the control of machines. The southern German mechanical engineering specialist vhf camfacture AG responds to this trend with a comfortable tablet control for its new milling machine X.

„With the tablet control, we have found a simple, demand-oriented and innovative solution that precisely meets our customers' need for modern easy-to-use technology,“ summarises CEO Frank Benzinger. For the successful machine manufacturer, the tablet control is the logical evolution in the area of smart machine operation.

Next Level Milling

vhf has always attached great importance to an easy handling of its machines. The new tablet control makes the operation of the X even more comfortable for its users: With the robust tablet, the machine operator can select the numerous functions of the X clearly and smartly via touchscreen. The vhf app sets new standards with its extensive technical possibilities and its modern user experience, no matter whether it is about switching the vacuum table, managing the tool database, controlling the workpiece stops or approaching the workpiece zero point. The clear user interface enables fast and intuitive control. In this way, the tablet can be easily integrated into the demanding work environment and the conditions of a production environment. The machine operator has a full overview at all times in order to be able to produce efficiently.

The vhf X

The CNC milling machine for panel processing X is vhf's most innovative milling machine. It combines optimum precision, drive power and stability for its users. On a 2 x 3 metre machining area, the machine offers both innovative technology Made in Germany and intuitive operating comfort. Its additionally integrable XtraUnit also equips it optimally for cutting and grooving.
