

## **The new vhf tool catalogue is now available**

**The high-quality portfolio of vhf camfacture AG is presented in a modern and clear look.**

**Ammerbuch, 31 May 2022: New modern look and a better overview: With the new tool catalogue, customers of vhf camfacture AG can browse the extensive portfolio of the southern German machine builder and tool manufacturer even faster.**

A new recommendation table, which includes all tools, is particularly helpful for easy orientation. The weighted ratings indicate the respective degree of suitability of the tool for different materials. The user can see at a glance which tool the vhf specialists recommend and is supported in the search for both universal and special tools. This way, even beginners can easily find the ideal carbide or diamond tool.

Clearly structured, the vhf tool catalogue provides the user with a comprehensive overview of the high-quality CNC tools from vhf's in-house production. 144 pages contain single-tooth, double-tooth and multi-tooth as well as composite milling cutters. The vhf portfolio also includes engraving tools, deburrers, router bits, threading tools, drills as well as lances, knives and diamond tools for milling and polishing. Customers can order the tools in numerous designs and cutting geometries, depending on their needs and applications. Especially in the field of single tooth cutters, vhf offers a broad portfolio that is second to none. In total, the machine builder has more than 250,000 tools permanently in stock.

The extensive range of vhf accessories rounds off the assortment: Here you will find, for example, helpful products for workpiece fixing, suitable spindle accessories as well as efficient coolants and lubricants. The catalogue also offers a lot of valuable information as well as tips and tricks on CNC milling. Thus, the tool catalogue is also a popular reference book for interested CNC millers. At the FESPA trade fair, which will take place in Berlin from 31 May 2022, the catalogue will also be available as a print version for customers and interested parties for the first time. It is also available online in PDF format ([download.vhf.de](https://download.vhf.de)).

With many years of experience, vhf develops and manufactures high-quality carbide and diamond tools for milling, cutting, thread milling, engraving or chamfering. vhf attaches great importance to quality: The implementation of the claim Creating Perfection is always guaranteed for vhf products.
