vhf and Ivoclar further expand strategic cooperation

vhf, one of the leading manufacturers of dental milling and grinding machines, tools and CAM software, and the Ivoclar Group, one of the world's leading providers of integrated solutions for high-quality dental applications, are further expanding their long-standing successful partnership with the validation of additional vhf milling machines for processing the popular IPS e.max CAD. Attractive material starter packs, including product training, also help users of new vhf milling machines to quickly get started with their own CAM production.

vhf camfacture AG has been an *Ivoclar Authorized Milling Partner* for IPS e.max CAD since 2024 with its N4+ wet milling machine. This guarantees reliable processing of the original lithium disilicate glass-ceramic and reproducible results. From November 2025, the highly automated Z4 from the **HIGH END CLASS** and the compact E4 from the **EASE CLASS** will also be authorized for the efficient CAD/CAM production of fully anatomical restorations from IPS e.max CAD with PrograMill holders. The material impresses with its outstanding aesthetics, clinically proven durability, and wide range of applications. Users can therefore rely on first-class results – with consistently coordinated workflows for restorations with high aesthetics, strength, and durability.

Quick entry into one's own production

To make it as quick and easy as possible to start producing dental restorations, vhf and Ivoclar are now also cooperating on materials: When purchasing a vhf milling or grinding machine, dentists benefit from a country-specific voucher for a free comprehensive Ivoclar CAD/CAM material starter package, including training for the practice team in the clinical process.

Milling technology meets material expertise

With this strong partnership, vhf and Ivoclar combine the best of both worlds: vhf's fast, high-precision, and user-friendly milling and grinding machines meet Ivoclar materials that are not only extremely durable but also characterized by high aesthetic quality. The result: first-class dental restorations that patients can enjoy for a long time to come.

Images

The processing of Ivoclar's popular IPS e.max CAD lithium disilicate glass ceramic is now also officially validated on the vhf E4 and Z4.

About vhf camfacture AG

vhf camfacture AG is one of the leading manufacturers of dental and portal milling machines, high-quality tools, and compatible CAM software. Founded in 1988, the company offers an open, perfectly matched system for processing all common materials in the dental, manufacturing, and sign making industry. Thanks to highest quality standards, the company's customers can rely on best-in-class manufacturing solutions, ensured by around 350 dedicated employees and proven by ISO 9001 certification.

November, 20 2025

Development and production take place exclusively in Germany – at the headquarters in Ammerbuch (Baden-Württemberg) and in Fürth (Bavaria). Internationally, vhf is represented with locations in Hauppauge near New York and in Shanghai.
