From milling system to digital platform: vhf makes existing machines ready for the next generation of dental manufacturing

Starting October 5, 2026, users will be able to upgrade their vhf milling machines to vhf digital solutions. For the first time, existing customers will gain access to a connected digital manufacturing environment featuring intelligent automation functions, centralized machine management, and continuous software updates. The result: more efficient processes, greater transparency, and machining times up to 20 percent shorter.

With vhf **digital solutions**, vhf camfacture AG is expanding its digital ecosystem to include existing machine installations. The upgrade includes the new generation of CAM software – dental**cam** 9 and dental**cnc** 9 – as well as the digital control center my**vhf**. Users benefit from an end-to-end workflow that intelligently connects machines, software, service, and data. For the first time, vhf is opening up its installed machine base to the benefits of a continuously evolving digital platform. Customers benefit not only from new features but also from future innovations and regular software updates.

The new generation of software significantly increases the level of automation in manufacturing. Features such as intelligent blank selection, auto-nesting, auto-leveling, automatic connector placement, and optimized machining strategies reduce manual steps and support a more efficient production process. At the same time, machining times are reduced by up to 20 percent compared to the previous generation.

Laboratories with multiple machines, in particular, benefit from these new capabilities. With just a single installation, up to six vhf milling machines can be centrally managed and controlled. This reduces administrative overhead and simplifies the scaling of production.

October 5, 2026

Another key focus is the integration of digital workflows. New interfaces enable connectivity to various cloud and design services. At the same time, vhf **digital solutions** lay the foundation for even closer integration of future digital workflows across the entire dental value chain.

At the heart of the solution is the digital customer and service platform my**vhf**. Through live data, productivity analyses, and push notifications, users can monitor their production at all times. The platform is complemented by a maintenance overview, automatic software updates, access to training offerings from the vhf **academy**, and a direct connection to service and knowledge resources. At the same time, the new generation of software meets current cybersecurity and digital future-readiness requirements, thereby supporting users' long-term investment security.

“With vhf **digital solutions**, we are transforming our milling machines into a connected digital platform for dental manufacturing,” says Frank Benzinger, CEO of vhf camfacture AG. “Our customers benefit from higher productivity, greater transparency, and a platform that is continuously being developed. In this way, we safeguard their investments over the long term and lay the foundation for the digital manufacturing of tomorrow.”

Stefanie Ganz, my**vhf** Project Manager at vhf camfacture AG, also sees the upgrade as an important milestone: “With this upgrade, we’re now giving our existing customers access to a new generation of digital dental manufacturing. This enables them to expand the capabilities of their existing machine while benefiting from future developments.”

Free upgrades for machines manufactured in 2025 or later

For all vhf machines manufactured in 2025 or later, the upgrade to vhf **digital solutions** is available free of charge through December 31, 2026. For machines manufactured in earlier years, vhf offers attractive upgrade options through authorized dealers.

About vhf camfacture AG

vhf camfacture AG is one of the leading manufacturers of dental and portal milling machines, high-quality tools, and compatible CAM software. Founded in 1988, the company offers an open, perfectly matched system for processing all common materials in the dental, manufacturing, and sign making industry. Thanks to highest quality standards, the company's customers can rely on best-in-class manufacturing solutions, ensured by around 300 dedicated employees and proven by ISO 9001:2015 certification.

Development and production take place exclusively in Germany. With a location in Hauppauge, near New York, and a global sales and service network, vhf serves customers in over 70 countries.
