

vhf digital solutions – let your work flow.

The software platform for connected workflows
and greater efficiency in dental manufacturing.

AI modified

Full control. More freedom.

For a noticeably smoother production workflow in your lab.

Tight deadlines, increasing complexity, and a growing number of concurrent orders present dental labs with new challenges every day. At the same time, customers expect fast turnaround times, outstanding quality, and maximum reliability.

With vhf **digital solutions**, the intelligent CAM software dental**cam** 9, the machine control software dental**cnc** 9, and the digital control center my**vhf** work seamlessly

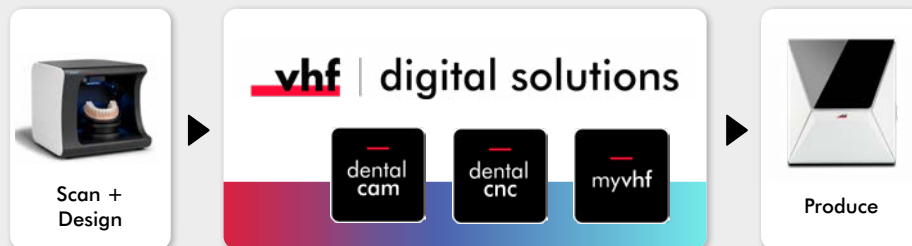

together. Automated functions and vhf's manufacturing expertise embedded in the software take care of many routine tasks, accelerate your workflows, and reduce manual effort.

Thanks to real-time data, intelligent analytics, and push notifications, you can keep track of ongoing jobs, machine status, and productivity at all times. This enables faster, more transparent workflows and gives you more time to focus on what really matters: serving your customers.

With vhf **digital solutions**, machines, software, and data are intelligently connected to create seamless and efficient workflows in your lab.

Your fully connected workflow.

Fast

Automated functions and connected machines ensure highly efficient workflows

Transparent

Real-time overview of your processes and machine status

Easy

A consistent and intuitive user interface makes it easy to get started with digital workflows

No license fees. No additional charges.

vhf **digital solutions** are included with every machine, along with all updates within the respective software version. This contributes to an exceptionally attractive total cost of ownership throughout the entire life cycle of your machine.

EN

vhf digital solutions – more than just software.

vhf **digital solutions** combine intelligent software, high-performance vhf machines, and the central customer platform myvhf into a seamless digital workflow. Your key benefits at a glance:

1

Full control over your manufacturing

The intuitive dashboard, live data, and push notifications keep you informed at all times about machine status, ongoing jobs, and productivity.

2

Unified access

User-friendly access to all vhf digital services, whether on a PC, tablet, or smartphone.

3

Seamless CAD/CAM workflows

From open STL import to full CAD/CAM integration, dentalcam 9 enables efficient digital workflows with fewer manual steps. Automatically transferred metadata reduces errors and speeds up job preparation.

4

Reliable results

vhf's manufacturing expertise, embedded in the software, ensures optimal results across a wide range of materials and indications.

5

Open system – reliable results

Enjoy the freedom of an open system and use the scanners, CAD software, and materials of your choice. Hundreds of materials validated at the vhf Test Center, along with tailored milling strategies, ensure reliable and reproducible manufacturing.

6

Automated performance features

Thanks to Auto-Nesting, Auto-Leveling, and Auto-Connector Placement, your restorations are automatically positioned, optimally aligned, and provided with connectors.

7

Perfectly matched technology

Software, tools, and vhf milling and grinding machines come from a single source and work together seamlessly.

8

Ready for the future

Continuous improvements and new features ensure that your software remains up to date for years to come.
