vhf digital solutions – let your work flow.

The software platform for connected workflows
and greater efficiency in dental manufacturing.

More time for your patients.

The modern way to manufacture dental restorations: digitally and connected.

With vhf **digital solutions**, in-house fabrication of dental restorations is easier than ever. The intelligent software and its seamless interaction with vhf milling and grinding machines enable even users without CAM experience to get started quickly and confidently with digital manufacturing.

Automated functions and vhf's manufacturing expertise built into the software take care of many routine tasks,

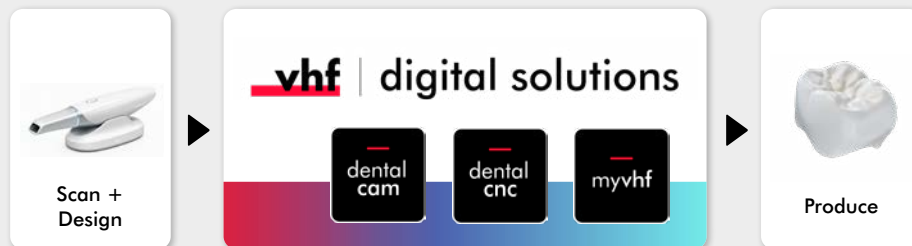

accelerate your workflows, and reduce the effort required to operate your system. At the same time, myvhf keeps you up to date with all relevant information about your machines – whether on a PC or laptop, or via the app with push notifications on your smartphone or tablet.

This allows you to work faster, more easily, and with greater transparency – giving you more time for what really matters: your patients.

Our innovative solutions enable you to produce independently – right in your practice.

Your fully connected workflow.

Fast

Automated functions and connected machines ensure highly efficient workflows

Transparent

Real-time overview of your processes and machine status

Easy

A consistent and intuitive user interface makes it easy to get started with digital workflows

No license fees. No additional charges.

vhf **digital solutions** are included with every machine, along with all updates within the respective software version. This contributes to an exceptionally attractive total cost of ownership throughout the entire life cycle of your machine.

EN

vhf digital solutions – more than just software.

vhf **digital solutions** combine intelligent software, high-performance vhf machines, and the central customer platform myvhf into a seamless digital workflow. Your key benefits at a glance:

1

Easy to get started

The intuitive user interface makes it easy to get started – even without CAM experience.

2

Seamless CAD Integration

A direct CAD connection and automatically imported metadata reduce manual steps and make the journey from design to manufacturing easier than ever before.

3

Perfectly matched technology

Software, tools, and vhf milling and grinding machines all come from a single source and work together seamlessly.

4

Reliable results

The manufacturing expertise from vhf embedded in the software ensures optimal results across a wide range of materials and indications.

5

Manufacturing reliability without vendor lock-in

Enjoy the freedom of an open system and use the scanners, CAD software, and materials of your choice. Hundreds of materials validated at the vhf Test Center, along with tailored milling strategies, ensure reliable and reproducible manufacturing.

6

Everything at a glance – anytime, anywhere

A dashboard with live data and statistics, along with push notifications, keeps you informed at all times via myvhf about the status of your machines and ongoing jobs.

7

Support whenever you need it

With the 24/7 vhf Bot, dentalportal, vhf academy, and personalized service, you'll receive exactly the support you need.

8

Ready for the future

Regular updates and new features ensure that your software remains up to date well into the future.
